Duration

17 secs

Marks

0.00/115.00

Grade**0.00** out of 100.00

Question 1

Not answered

Marked out of 1.00

 [Flag question](#)

OFC Cable markers are normally provided at every ----- meter on the cable route.

- ☐ a. 150
- ☐ b. 50
- ☐ c. 100
- ☐ d. 75

The correct answer is: 50

Question 2

Not answered

Marked out of 1.00

 [Flag question](#)

----- is the width of the range of wavelengths emitted by the light source

- ☐ a. Chromatic Dispersion
- ☐ b. Beam width
- ☐ c. Bandwidth
- ☐ d. Spectral width

The correct answer is: Spectral width

Question 3

Not answered

Marked out of 1.00

[Flag question](#)

----- refers to the abrupt of change in refractive index from core to clad

- ☐ a. Step index
- ☐ b. Graded index
- ☐ c. Half step index
- ☐ d. Semi-graded index

The correct answer is: Step index

Question 4

Not answered

Marked out of 1.00

[Flag question](#)

-----type of fiber has the zero-dispersion point is shifted to the wavelength region 1550nm.

- ☐ a. G.655
- ☐ b. G.653
- ☐ c. G.652 & G.655
- ☐ d. G.652

The correct answer is: G.653

Question 5

Not answered

Marked out of 1.00

[Flag question](#)

-----fibers have high dispersion at 1550 nm.

- ☐ a. G.657
- ☐ b. G.652
- ☐ c. G.653
- ☐ d. G.655

The correct answer is: G.652

Question 6

Not answered

Marked out of 1.00

[Flag question](#)

12-fiber armored optic fiber cable can be used for ----- laying

- ☐ a. Underground as well as for aerial
- ☐ b. Only aerial
- ☐ c. Only Underground

The correct answer is: Underground as well as for aerial

Question 7

Not answered

Marked out of 1.00

 [Flag question](#)

A device which converts electrical energy in the form of a current into optical energy is called as _____

- ☐ a. Circulator
- ☐ b. Optical source
- ☐ c. Optical isolator
- ☐ d. Optical coupler

The correct answer is: Optical source

Question 8

Not answered

Marked out of 1.00

 [Flag question](#)

A Loss of 10 dB implies -----

- ☐ a. 10% of power has been lost
- ☐ b. 90% of power has been lost
- ☐ c. 90 watts' power lost
- ☐ d. 10 watts' power lost

The correct answer is: 90% of power has been lost

Question 9

Not answered

Marked out of 1.00

[Flag question](#)

A Loss of 3 dB implies-----

- ☐ a. 3% of power has been lost
- ☐ b. 90% of power has been lost
- ☐ c. 50% of power has been lost
- ☐ d. 10% power lost

The correct answer is: 90% of power has been lost

Question 10

Not answered

Marked out of 1.00

[Flag question](#)

A mode for which the field components in the direction of propagation are small compared to components perpendicular to that direction is called

- ☐ a. Circularly polarized mode
- ☐ b. Linearly polarized mode
- ☐ c. TM mode (0%)
- ☐ d. TEM mode

The correct answer is: Linearly polarized mode

Question 11

Not answered

Marked out of 1.00

[Flag question](#)

After laying the optic fiber cable at least -
----- mm from the surface of the cable
should be covered with riddle earth.

- ☐ a. 12000
- ☐ b. 1120
- ☐ c. 1200
- ☐ d. 120

The correct answer is: 120

Question 12

Not answered

Marked out of 1.00

[Flag question](#)

An attenuation of 3dB corresponds to ----
----- % reduction in original power

- ☐ a. 50
- ☐ b. 30
- ☐ c. 10
- ☐ d. 3

The correct answer is: 50

Question 13

Not answered

Marked out of 1.00

[Flag question](#)

An optical transmitter is emitting power at 0 dBm which is equivalent to -----

- ☐ a. 1 Watt
- ☐ b. 1 micro watt
- ☐ c. 1 mW
- ☐ d. 0 watt

The correct answer is: 1 mW

Question 14

Not answered

Marked out of 1.00

[Flag question](#)

Biconic connectors are generally used in ----- applications in optic fiber communication.

- ☐ a. WAN
- ☐ b. LAN, MAN and WAN
- ☐ c. MAN
- ☐ d. LAN

The correct answer is: LAN, MAN and WAN

Question 15

Not answered

Marked out of 1.00

[Flag question](#)

Brick protection to be provided in OFC trench during OFC cable laying at -----

- ☐ a. Station/yards
- ☐ b. Track crossings
- ☐ c. Culverts
- ☐ d. Bridges

The correct answer is: Station/yards

Question 16

Not answered

Marked out of 1.00

[Flag question](#)

Cleaving of the fibre is performed to obtain ----- on end face of the fiber.

- ☐ a. 90 degrees
- ☐ b. 60 degrees
- ☐ c. 40 degrees
- ☐ d. 30 degrees

The correct answer is: 90 degrees

Question 17

Not answered

Marked out of 1.00

 [Flag question](#)

Cut-off wavelength of a SM fiber is greater than -----nm

- ☐ a. 1450
- ☐ b. 1260
- ☐ c. 1550
- ☐ d. 1310

The correct answer is: 1260

Question 18

Not answered

Marked out of 1.00

 [Flag question](#)

Dark current (I_d) of an optical detector is defined as-----

- ☐ a. It is the ratio of rate of recombination and Electron - hole pair generation
- ☐ b. It is the ratio of photon generation rate and electron incidence rate
- ☐ c. It is the ratio of electron generation rate and photon incidence rate
- ☐ d. Dark current is the current generated in a photo detector in the absence of any optical signal.

The correct answer is: Dark current is the current generated in a photo detector in the absence of any optical signal.

Question 19

Not answered

Marked out of 1.00

 [Flag question](#)

Dispersion is maximum in ----- type of optical fibers

- ☐ a. Single-mode graded-index
- ☐ b. Multimode graded-index
- ☐ c. Single-mode step-index
- ☐ d. Multimode step-index

The correct answer is: Multimode step-index

Question 20

Not answered

Marked out of 1.00

 [Flag question](#)

During installation a minimum of -----
----- meter of optic fiber cable on each end is coiled in the jointing pit.

- ☐ a. 15
- ☐ b. 5
- ☐ c. 20
- ☐ d. 10

The correct answer is: 10

Question 21

Not answered

Marked out of 1.00

[Flag question](#)

During OFC cable laying maximum speed of cable laying must be -----

- ☐ a. 10mtrs/minute
- ☐ b. 100mtrs/minute
- ☐ c. 200mtrs/minute
- ☐ d. 20mtrs/minute

The correct answer is: 10mtrs/minute

Question 22

Not answered

Marked out of 1.00

[Flag question](#)

Excessive pulse width in OTDR causes ----
----- .

- ☐ a. Decrease in Dead zone length
- ☐ b. Ghost refraction occurs
- ☐ c. Dead zone length is unaffected
- ☐ d. Increase in Dead zone length

The correct answer is: Increase in Dead zone length

Question 23

Not answered

Marked out of 1.00

 [Flag question](#)

Ferules of optic fiber connectors are made of ----- materials.

- ☐ a. Only metal
- ☐ b. Only ceramic
- ☐ c. Metal or ceramic or plastic
- ☐ d. Only plastic

The correct answer is: Metal or ceramic or plastic

Question 24

Not answered

Marked out of 1.00

[Flag question](#)

For best results of measurements with OTDR ----- .

- ☐ a. Auto-mode of settings should not be used
- ☐ b. Knowledge of Cable plant is required
- ☐ c. Knowledge of Cable plant is required, Auto-mode of settings should not be used & LSA averaging method to be used
- ☐ d. LSA averaging method to be used

The correct answer is: Knowledge of Cable plant is required, Auto-mode of settings should not be used & LSA averaging method to be used

Question 25

Not answered

Marked out of 1.00

 [Flag question](#)

Generally Light sources are provided to emit light at ----- power levels.

- ☐ a. 3dBm or -7dBm
- ☐ b. 0dBm or -7dBm
- ☐ c. 0dBm or -6dBm
- ☐ d. 0dBm or -3dBm

The correct answer is: 0dBm or -7dBm

Question 26

Not answered

Marked out of 1.00

 [Flag question](#)

Generally Light sources are provided to emit light at ----- nm wave lengths

- ☐ a. 850, 1310, 1550
- ☐ b. 850, 1200, 1460
- ☐ c. 800, 1200, 1460
- ☐ d. 850, 1410, 1350

The correct answer is: 850, 1310, 1550

Question 27

Not answered

Marked out of 1.00

[Flag question](#)

Identify the correct statement -----

- ☐ a. The external quantum efficiency is always less than the internal quantum efficiency
- ☐ b. Cannot be concluded & depends on other factors
- ☐ c. The internal quantum efficiency always less than the external quantum efficiency
- ☐ d. External and internal quantum efficiencies are always same

The correct answer is: The external quantum efficiency is always less than the internal quantum efficiency

Question 28

Not answered

Marked out of 1.00

 [Flag question](#)

Impurities and irregularities in the physical construction of optical fiber causes

- ☐ a. Scattering
- ☐ b. Total internal reflection
- ☐ c. Absorption
- ☐ d. Four wave mixing

The correct answer is: Scattering

Question 29

Not answered

Marked out of 1.00

 [Flag question](#)

In graded index fiber dispersion is reduced due to variation of refractive index in the ----- fiber

- ☐ a. Core
- ☐ b. Cladding
- ☐ c. Buffer
- ☐ d. Tube

The correct answer is: Core

Question 30

Not answered

Marked out of 1.00

[Flag question](#)

In graded index fiber the refractive index of the core varies following the parabolic rule up to the core cladding interface and then remains constant throughout the cladding.

- ☐ a. The statement is False
- ☐ b. Insufficient data to conclude True or False
- ☐ c. The statement is True

The correct answer is: The statement is True

Question 31

Not answered

Marked out of 1.00

 [Flag question](#)

In optical link design the reason for keeping system margin is/are -----

- ☐ a. Environmental degradations
- ☐ b. Future cable cuts and subsequent losses
- ☐ c. Aging effects
- ☐ d. Future cable cuts and subsequent losses, Aging effects, & Environmental degradations

The correct answer is: Future cable cuts and subsequent losses, Aging effects, & Environmental degradations

Question 32

Not answered

Marked out of 1.00

 [Flag question](#)

In order to prevent theft of OFC , steel troughs with optic fiber cable should be filled up by...

- ☐ a. Bitumen compound
- ☐ b. Graphite grease
- ☐ c. Cadmium compound
- ☐ d. Petroleum Jelly

The correct answer is: Bitumen compound

Question 33

Not answered

Marked out of 1.00

 [Flag question](#)

In Rise time budget analysis Rise time of fiber can be found using ----- .

- ☐ a. Suitable measurement technique
- ☐ b. DATA Sheet of OEM
- ☐ c. From Dispersion coefficient and Bandwidth
- ☐ d. Can be assumed reasonably

The correct answer is: From Dispersion coefficient and Bandwidth

Question 34

Not answered

Marked out of 1.00

[Flag question](#)

In steel troughs to prevent theft of OFC cable bitumen compound should be filled up to a height of approximate -----mm.

- ☐ a. 10
- ☐ b. 30
- ☐ c. 20
- ☐ d. 60

The correct answer is: 60

Question 35

Not answered

Marked out of 1.00

 [Flag question](#)

In step index fiber -----

- ☐ a. Refractive index remains constant throughout the core
- ☐ b. Refractive index remains constant throughout the core & decreases suddenly to some value at the core cladding interface
- ☐ c. Refractive index decreases to some value at the core cladding interface
- ☐ d. Refractive index remains constant throughout the cladding

The correct answer is: Refractive index remains constant throughout the core & decreases suddenly to some value at the core cladding interface

Question 36

Not answered

Marked out of 1.00

 [Flag question](#)

Infrared range for fiber optics-----

- ☐ a. 400 – 7000 nm
- ☐ b. 300 – 2000 nm
- ☐ c. 400 – 700 nm
- ☐ d. 700 – 1675 nm

The correct answer is: 700 – 1675 nm

Question 37

Not answered

Marked out of 1.00

 [Flag question](#)

ITU-T Recommendation G.652 of optical fibre describes the properties of

- ☐ a. Non dispersion-shifted fiber
- ☐ b. Non-zero dispersion-shifted fiber
- ☐ c. Dispersion-shifted fiber
- ☐ d. Zero dispersion-shifted fiber

The correct answer is: Non dispersion-shifted fiber

Question 38

Not answered

Marked out of 1.00

[Flag question](#)

ITU-T Recommendation G.653 describes the properties of

- ☐ a. Non dispersion-shifted fiber
- ☐ b. Dispersion-shifted fiber
- ☐ c. Attenuation-shifted fiber
- ☐ d. Non-zero dispersion-shifted fiber

The correct answer is: Dispersion-shifted fiber

Question 39

Not answered

Marked out of 1.00

[Flag question](#)

ITU-T Recommendation G.655 describes the properties of -----

- ☐ a. Attenuation shifted fiber
- ☐ b. Non dispersion-shifted fiber
- ☐ c. Non-zero dispersion-shifted fiber
- ☐ d. Dispersion-shifted fiber

The correct answer is: Non-zero dispersion-shifted fiber

Question 40

Not answered

Marked out of 1.00

[Flag question](#)

Laser light is ----- emission.

- ☐ a. Spontaneous
- ☐ b. Coherent and stimulated
- ☐ c. Coherent
- ☐ d. Stimulated

The correct answer is: Coherent and stimulated

Question 41

Not answered

Marked out of 1.00

[Flag question](#)

Light emission can occur through -----

- ☐ a. Neither spontaneous & stimulated emissions
- ☐ b. Spontaneous emission
- ☐ c. Both Stimulated and Spontaneous emissions
- ☐ d. Stimulated emission

The correct answer is: Both Stimulated and Spontaneous emissions

Question 42

Not answered

Marked out of 1.00

[Flag question](#)

Light traveling in optical fiber follows which of the following principles.

- ☐ a. Light theory
- ☐ b. Huygen's principle
- ☐ c. Snell's law
- ☐ d. Reflection theory

The correct answer is: Snell's law

Question 43

Not answered

Marked out of 1.00

[Flag question](#)

LSPM (Light source Power meter) method is superior to OTDR for Measuring -----

- ☐ a. Power and distance
- ☐ b. Power only
- ☐ c. Optical return Loss only
- ☐ d. Distance only

The correct answer is: Power only

Question 44

Not answered

Marked out of 1.00

[Flag question](#)

LSZH(Low Smoke zero Halogen) cables are preferred for indoor applications because

- ☐ a. They are less toxic and slower to ignite as well as halogen free
- ☐ b. Less toxic and slower to ignite
- ☐ c. They are halogen free
- ☐ d. They are not preferred for indoor applications

The correct answer is: They are less toxic and slower to ignite as well as halogen free

Question 45

Not answered

Marked out of 1.00

 [Flag question](#)

Mode is an available distribution of electromagnetic field in to the direction of light propagation.

- ☐ a. Both transverse and longitudinal planes
- ☐ b. Neither Transverse nor longitudinal planes
- ☐ c. A plane longitudinal
- ☐ d. A plane transverse

The correct answer is: A plane transverse

Question 46

Not answered

Marked out of 1.00

 [Flag question](#)

Multimode fiber is best designed for -----
----- transmission distances.

- ☐ a. Longer
- ☐ b. Medium
- ☐ c. Shorter

The correct answer is: Shorter

Question 47

Not answered

Marked out of 1.00

[Flag question](#)

OFC Cable attenuation is usually expressed in terms of-----

- ☐ a. Voltage drop per inch
- ☐ b. dB/km
- ☐ c. Intensity per mile
- ☐ d. Loss per foot

The correct answer is: dB/km

Question 48

Not answered

Marked out of 1.00

[Flag question](#)

On OTDR trace horizontal axis represents

- ☐ a. Launch Power level
- ☐ b. Return Power level
- ☐ c. Distance from source
- ☐ d. Time

The correct answer is: Distance from source

Question 49

Not answered

Marked out of 1.00

 [Flag question](#)

On OTDR trace Vertical axis represents ---

- ☐ a. Return Power level
- ☐ b. Time
- ☐ c. Distance from source
- ☐ d. Launch Power Level

The correct answer is: Return Power level

Question 50

Not answered

Marked out of 1.00

 [Flag question](#)

Optical fibers accept ----- signals only.

- ☐ a. Bipolar
- ☐ b. Accepts any signal without restriction on polarity
- ☐ c. Neither unipolar nor Bi polar
- ☐ d. unipolar

The correct answer is: unipolar

Question 51

Not answered

Marked out of 1.00

 [Flag question](#)

Optical power meter has got the option for displaying optical power in -----

- ☐ a. dBm only
- ☐ b. dBm or μW
- ☐ c. μW only
- ☐ d. dBm or pW

The correct answer is: dBm or μW

Question 52

Not answered

Marked out of 1.00

 [Flag question](#)

Optical sources include -----

- ☐ a. LEDs only
- ☐ b. LASER only
- ☐ c. LEDs and LASERs only
- ☐ d. LASERs, LEDs and APDs

The correct answer is: LEDs and LASERs only

Question 53

Not answered

Marked out of 1.00

 [Flag question](#)

Optical time domain reflectometer (OTDR) is also called a backscatter measurement method

- ☐ a. TRUE
- ☐ b. FALSE

The correct answer is: TRUE

Question 54

Not answered

Marked out of 1.00

 [Flag question](#)

OTDR stands for-----

- ☐ a. Optical Time-Domain Reflectometer
- ☐ b. Optical Time-Delay Response
- ☐ c. Optical Time-Division Relay
- ☐ d. Optical Timing Delay Requirement

The correct answer is: Optical Time-Domain Reflectometer

Question 55

Not answered

Marked out of 1.00

[Flag question](#)

OTDR trace to be obtained and analyzed in OFC installation. Identify the correct statement

- ☐ a. At both wave lengths before laying only
- ☐ b. Before laying at 1310nm, and after laying at 1550nm
- ☐ c. Before laying at 1550nm, and after laying at 1310nm
- ☐ d. At both wave lengths before as well as after laying

The correct answer is: At both wave lengths before as well as after laying

Question 56

Not answered

Marked out of 1.00

 [Flag question](#)

OTDR works on the principle of ----- of light.

- ☐ a. Back scattering
- ☐ b. Reflection
- ☐ c. Absorption
- ☐ d. Refraction

The correct answer is: Back scattering

Question 57

Not answered

Marked out of 1.00

 [Flag question](#)

Photo detectors include

- ☐ a. APDs, PIN diodes & MSMs
- ☐ b. PIN diode and APDs
- ☐ c. APDs and MSMs
- ☐ d. MSMs and APDs

The correct answer is: APDs, PIN diodes & MSMs

Question 58

Not answered

Marked out of 1.00

 [Flag question](#)

Photodiodes operate in Forward bias

- ☐ a. TRUE
- ☐ b. FALSE

The correct answer is: FALSE

Question 59

Not answered

Marked out of 1.00

 [Flag question](#)

Principle involved in optical detector operation is -----

- ☐ a. Stocky effect
- ☐ b. Photo electric effect
- ☐ c. Seebeck effect
- ☐ d. Faraday Effect

The correct answer is: Photo electric effect

Question 60

Not answered

Marked out of 1.00

[Flag question](#)

Pulling tension/force on the cable during
OFC laying should not exceed -----

- ☐ a. 2670 KN
- ☐ b. 267 N
- ☐ c. 267 Kg
- ☐ d. 2670 Kg

The correct answer is: 267 Kg

Question 61

Not answered

Marked out of 1.00

[Flag question](#)

Quantum efficiency w.r.t Optical detectors is defined as -----

- ☐ a. It is the ratio of electron generation rate and photon incidence rate
- ☐ b. It can be defined as fraction of electrons which contribute to the external photocurrent
- ☐ c. It can be defined as fraction of photons which contribute to the external photocurrent
- ☐ d. It can be defined as fraction of photons which contribute to the external photocurrent or It is the ratio of electron generation rate and photon incidence rate

The correct answer is: It can be defined as fraction of photons which contribute to the external photocurrent or It is the ratio of electron generation rate and photon incidence rate

Question 62

Not answered

Marked out of 1.00

 [Flag question](#)

Reduction in acquisition time in OTDR causes

- ☐ a. Noisy trace is obtained
- ☐ b. Dead zone length is extended
- ☐ c. Ghost reflection occurs
- ☐ d. Smooth trace is obtained

The correct answer is: Noisy trace is obtained

Question 63

Not answered

Marked out of 1.00

 [Flag question](#)

Refractive index of glass-----

- ☐ a. 1.4
- ☐ b. 1.2
- ☐ c. 1.5
- ☐ d. 1.0

The correct answer is: 1.5

Question 64

Not answered

Marked out of 1.00

[Flag question](#)

Responsivity of a Photo detector defined as -----

- ☐ a. A measure of how much output light is obtained for each watt of input light
- ☐ b. A measure of how much output current is obtained for each watt of input light
- ☐ c. A measure of how much output light is obtained for each amp of input current
- ☐ d. A measure of how much output current is obtained for each Amp of input current

The correct answer is: A measure of how much output current is obtained for each watt of input light

Question 65

Not answered

Marked out of 1.00

 [Flag question](#)

Scattering limits, the use of wavelengths below nm in optical fiber.

- ☐ a. 800
- ☐ b. 1550
- ☐ c. 650
- ☐ d. 1310

The correct answer is: 800

Question 66

Not answered

Marked out of 1.00

 [Flag question](#)

The ----- fiber is very much suitable for single wavelength 1550 nm but is unsuitable for DWDM systems.

- ☐ a. NZ-DSF G.655 and NDSF G.652
- ☐ b. Non zero-dispersion-shifted fibers (NZ-DSF) G.655
- ☐ c. Non dispersion-shifted fiber (NDSF) G.652
- ☐ d. DSF Dispersion-shifted fiber G.653

The correct answer is: DSF Dispersion-shifted fiber G.653

Question 67

Not answered

Marked out of 1.00

[Flag question](#)

The 24-fiber armored optic fiber cable contains -----

- ☐ a. 24 single loose tubes
- ☐ b. 6 loose tubes
- ☐ c. 2 loose tubes
- ☐ d. 3 loose tubes

The correct answer is: 6 loose tubes

Question 68

Not answered

Marked out of 1.00

[Flag question](#)

The band of light wavelengths that is too long to be seen by the human eye

- ☐ a. XRAY
- ☐ b. Ultraviolet
- ☐ c. Infrared
- ☐ d. Visible

The correct answer is: Infrared

Question 69

Not answered

Marked out of 1.00

[Flag question](#)

The bandwidth of a fiber is limited by-----

- ☐ a. Dispersion
- ☐ b. Mode
- ☐ c. Frequency
- ☐ d. Wavelength

The correct answer is: Dispersion

Question 70

Not answered

Marked out of 1.00

[Flag question](#)

The core of an optical fiber has a-----

- ☐ a. Higher refractive index than the cladding
- ☐ b. Lower refractive index than the cladding
- ☐ c. Similar refractive index with the cladding
- ☐ d. Lower refracted index than air

The correct answer is: Higher refractive index than the cladding

Question 71

Not answered

Marked out of 1.00

 [Flag question](#)

The Dead zone in OTDR is caused by -----

- ☐ a. Fresnel reflection and the amplifier recovery time
- ☐ b. Rayleigh backscatter (RBS) coefficient
- ☐ c. Fresnel reflection only
- ☐ d. Amplifier recovery time only

The correct answer is: Fresnel reflection and the amplifier recovery time

Question 72

Not answered

Marked out of 1.00

 [Flag question](#)

The disparity between the arrival times of different light rays at the output of a fiber while traveling through the fiber is known as

- ☐ a. Dispersion
- ☐ b. Scattering
- ☐ c. Wave Mixing
- ☐ d. Attenuation

The correct answer is: Dispersion

Question 73

Not answered

Marked out of 1.00

[Flag question](#)

The following are the cause of light attenuation in fiber optics except-----

--

- ☐ a. Backscattering
- ☐ b. Refraction
- ☐ c. Absorption
- ☐ d. Micro bends

The correct answer is: Refraction

Question 74

Not answered

Marked out of 1.00

[Flag question](#)

The internal quantum efficiency of an optical source is defined as -----

- ☐ a. It is the ratio of number of carriers generated & number of photons crossing the junction
- ☐ b. It is the ratio of number of carriers crossing the junction & number of photons generated
- ☐ c. It is the ratio of number of photons generated & no of carriers crossing the junction
- ☐ d. It is the product of number of photons generated & no of carriers crossing the junction

The correct answer is: It is the ratio of number of photons generated & no of carriers crossing the junction

Question 75

Not answered

Marked out of 1.00

[Flag question](#)

The light output from a light source can be switched between a test tone of -----
----- --and a CW wave.

- ☐ a. 270 Hz or 2 KHz or 10 KHz
- ☐ b. 270 KHz or 2 MHz or 10 MHz
- ☐ c. 270Hz or 2 KHz or 1 KHz
- ☐ d. 270 Hz or 2 Hz or 10 Hz

The correct answer is: 270Hz or 2 KHz or 1 KHz

Question 76

Not answered

Marked out of 1.00

[Flag question](#)

The loss offered by a fusion splice of optic fibers shall not exceed -----dB

- ☐ a. 0.2
- ☐ b. 0.05
- ☐ c. 1.5
- ☐ d. 0.005

The correct answer is: 0.2

Question 77

Not answered

Marked out of 1.00

 [Flag question](#)

The loss offered by a mechanical splicing of optic fibers should be less than -----dB.

- ☐ a. 0.5
- ☐ b. 0.05
- ☐ c. 0.005
- ☐ d. 1.5

The correct answer is: 0.5

Question 78

Not answered

Marked out of 1.00

 [Flag question](#)

The main drawback of optical fiber as a communication medium is that -----

- ☐ a. High EMI/EMC
- ☐ b. High cost
- ☐ c. Low attenuation
- ☐ d. Tapping is difficult

The correct answer is: Tapping is difficult

Question 79

Not answered

Marked out of 1.00

[Flag question](#)

The main Requirements of Optical sources include -----

- ☐ a. Spectral width & Directivity, Linearity and Reliability, Output Power & Output wave length
- ☐ b. Linearity and Reliability
- ☐ c. Spectral width & Directivity
- ☐ d. Output Power & Output wave length

The correct answer is: Spectral width & Directivity, Linearity and Reliability, Output Power & Output wave length

Question 80

Not answered

Marked out of 1.00

 [Flag question](#)

The mechanical splice is best suited for -

- ☐ a. field service conditions
- ☐ b. Quicker installation under ideal conditions
- ☐ c. situations in which cost of equipment is not a factor
- ☐ d. minimum attenuation losses

The correct answer is: field service conditions

Question 81

Not answered

Marked out of 1.00

 [Flag question](#)

The normal optic fiber cable drum length is ----- .

- ☐ a. 4 Km
- ☐ b. 2 Km
- ☐ c. 3 Km
- ☐ d. 1 Km

The correct answer is: 3 Km

Question 82

Not answered

Marked out of 1.00

[Flag question](#)

The number of modes that can propagate in fiber is a function of numerical aperture, core diameter and wavelength of light.

- ☐ a. The statement is True
- ☐ b. Insufficient data to conclude True or False
- ☐ c. The statement is False

The correct answer is: The statement is True

Question 83

Not answered

Marked out of 1.00

[Flag question](#)

The Numerical aperture is -----

- ☐ a. Light gathering capacity
- ☐ b. Light amplification capacity
- ☐ c. Light rejecting capacity
- ☐ d. Light emitting capacity

The correct answer is: Light gathering capacity

Question 84

Not answered

Marked out of 1.00

[Flag question](#)

The numerical aperture of a SM fiber is about -----

- ☐ a. 2.0 to 3.1
- ☐ b. 0.95 to 1.2
- ☐ c. 1.1 to 2.1
- ☐ d. 0.10 to 0.17.

The correct answer is: 0.10 to 0.17.

Question 85

Not answered

Marked out of 1.00

[Flag question](#)

The ratio of speed of light in air to the speed of light in another substance is called the-----

- ☐ a. Index of reflection
- ☐ b. Index of refraction
- ☐ c. Speed factor
- ☐ d. Dielectric constant

The correct answer is: Index of refraction

Question 86

Not answered

Marked out of 1.00

 [Flag question](#)

The speed of light is-----

- ☐ a. 186,000 miles/h
- ☐ b. 300,000 m/s
- ☐ c. 300 miles/h
- ☐ d. 300,000,000 m/s

Question 87

Not answered

Marked out of 1.00

 [Flag question](#)

The Tensile strength of the fiber is of the order of

- ☐ a. 44000 to 60000 kg per sq.cm.
- ☐ b. 4400 to 6000 kg per sq.cm.
- ☐ c. 440000 to 600000 kg per sq.mm.
- ☐ d. 440000 to 600000 kg per sq.cm.

The correct answer is: 44000 to 60000 kg per sq.cm.

Question 88

Not answered

Marked out of 1.00

[Flag question](#)

The term critical angle describes-----

- ☐ a. the point at which light is refracted
- ☐ b. the point at which light becomes invisible
- ☐ c. the point at which light has crossed the boundary layers from one index to another
- ☐ d. the point at which light has gone from the refractive mode to the reflective mode

The correct answer is: the point at which light has gone from the refractive mode to the reflective mode

Question 89

Not answered

Marked out of 1.00

 [Flag question](#)

The term dispersion describes the process of -----

- ☐ a. Separating light into its component frequencies
- ☐ b. the process by which light is absorbed by an uneven rough surface
- ☐ c. light scattering
- ☐ d. reflecting light from a smooth surface

The correct answer is: Separating light into its component frequencies

Question 90

Not answered

Marked out of 1.00

[Flag question](#)

The term power budgeting in optical fiber communication refers to -----

- ☐ a. the total power available minus the attenuation losses
- ☐ b. the comparative costs of fiber and copper installations
- ☐ c. The cost of cables, connectors, equipment, and installation
- ☐ d. the loss of power due to defective components

The correct answer is: the total power available minus the attenuation losses

Question 91

Not answered

Marked out of 1.00

[Flag question](#)

The wavelength of a visible extends from-----

- ☐ a. 200 to 660 nm
- ☐ b. 400 to 750 nm
- ☐ c. 700 to 1200 nm
- ☐ d. 0.8 to 1.6 μm

The correct answer is: 400 to 750 nm

Question 92

Not answered

Marked out of 1.00

[Flag question](#)

Total internal reflection takes place if the light ray strikes the interface at an angle -
-----critical angle

- ☐ a. Less than
- ☐ b. Equal to
- ☐ c. Greater than
- ☐ d. Zero

The correct answer is: Greater than

Question 93

Not answered

Marked out of 1.00

 [Flag question](#)

Transmission loss of optical fiber at a wavelength of 1310 nm is about -----
-dB/Km.

- ☐ a. 3.5
- ☐ b. 2.5
- ☐ c. 0.35
- ☐ d. 0.75

The correct answer is: 0.35

Question 94

Not answered

Marked out of 1.00

 [Flag question](#)

Transmission loss of optical fiber at a wavelength of 1550 nm is about -----
---dB/Km

- ☐ a. 25
- ☐ b. 2.5
- ☐ c. 0.025
- ☐ d. 0.25

The correct answer is: 0.25

Question 95

Not answered

Marked out of 1.00

[Flag question](#)

What is refractive index number

- ☐ a. a term for describing core elasticity
- ☐ b. a number which determines the core diameter
- ☐ c. a number which compares the transparency of a material with that of air
- ☐ d. a number assigned by the manufacturer to the fiber in question

The correct answer is: a number which compares the transparency of a material with that of air

Question 96

Not answered

Marked out of 1.00

[Flag question](#)

What is responsivity of a light detector

- ☐ a. The time required for the signal to go from 10 to 90 percent of maximum amplitude
- ☐ b. the ratio of output current to input current
- ☐ c. the ratio of the diode output current to optical input power
- ☐ d. the ratio of output current to output power

The correct answer is: the ratio of the diode output current to optical input power

Question 97

Not answered

Marked out of 1.00

[Flag question](#)

What is the unit of Responsivity?

- ☐ a. Ampere/volt
- ☐ b. Ampere/watt
- ☐ c. Watt/ampere
- ☐ d. Volts/ampere

The correct answer is: Ampere/watt

Question 98

Not answered

Marked out of 1.00

[Flag question](#)

What type of fiber has the highest modal dispersion?

- ☐ a. Step-index single mode
- ☐ b. Step-index multimode
- ☐ c. Graded index mode
- ☐ d. Graded index multimode

The correct answer is: Step-index multimode

Question 99

Not answered

Marked out of 1.00

 [Flag question](#)

Which of the following is NOT a common light detector?

- ☐ a. Photodiode
- ☐ b. Photovoltaic diode
- ☐ c. PIN photodiode
- ☐ d. Avalanche photodiode

The correct answer is: Photovoltaic diode

Question 100

Not answered

Marked out of 1.00

 [Flag question](#)

Which of the following is the fastest light sensor?

- ☐ a. Avalanche photodiode
- ☐ b. PIN photodiode
- ☐ c. Photovoltaic diode
- ☐ d. Phototransistor

The correct answer is: Avalanche photodiode

Question 101

Not answered

Marked out of 1.00

 [Flag question](#)

Which process gives the laser its special properties as an optical source?

- ☐ a. Stimulated emission
- ☐ b. Dispersion
- ☐ c. Spontaneous emission
- ☐ d. Stimulated absorption

The correct answer is: Stimulated emission

Question 102

Not answered

Marked out of 1.00

 [Flag question](#)

Which type of fiber optic cable is most widely used?

- ☐ a. Multimode step-index
- ☐ b. Single-mode graded-index
- ☐ c. Multimode graded-index
- ☐ d. Single-mode step-index

The correct answer is: Single-mode step-index

Question 103

Not answered

Marked out of 1.00

[Flag question](#)

Which type of fiber-optic cable has the least modal dispersion?

- ☐ a. Single-mode graded-index
- ☐ b. Single mode step-index
- ☐ c. Multimode step-index
- ☐ d. Multimode graded-index

The correct answer is: Single mode step-index

Question 104

Not answered

Marked out of 1.00

[Flag question](#)

Which type of fiber-optic cable is the best for very high speed data?

- ☐ a. Single-mode step-index
- ☐ b. Multimode step-index
- ☐ c. Multimode graded-index
- ☐ d. Single-mode graded-index

The correct answer is: Single-mode step-index

Question 105

Not answered

Marked out of 1.00

[Flag question](#)

Why are visible-light LEDs not used for fiber optics?

- ☐ a. It has weak signal
- ☐ b. It has high losses
- ☐ c. It has low attenuation
- ☐ d. It has short wave

The correct answer is: It has high losses

Question 106

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication Rayleigh's scattering is due to present in the silica matrix.

- ☐ a. Metal ions
- ☐ b. Water vapors
- ☐ c. H⁺ ions
- ☐ d. OH⁻ ions

The correct answer is: Metal ions

Question 107

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication, basic scenarios to be considered in PBA (Power budget analysis)

- ☐ a. The receiver and Optic fiber system is decided, and then what transmitter Minimum power would be needed?
- ☐ b. Maximum receiver power under minimum loss conditions
- ☐ c. In existing system, how much we could lengthen the fiber without changing the transmitter, receiver and still meet the minimum power requirement of receiver
- ☐ d. The receiver and Optic fiber system is decided; then what transmitter Minimum power would be needed? In existing system, how much we could lengthen the fiber without changing the transmitter, receiver and still meet the minimum power requirement of receiver, Maximum receiver power under minimum loss conditions.

The correct answer is: The receiver and Optic fiber system is decided; then what transmitter Minimum power would be needed? In existing system, how much we could lengthen the fiber without

changing the transmitter, receiver and still meet the minimum power requirement of receiver, Maximum receiver power under minimum loss conditions.

Question 108

Not answered

Marked out of 1.00

 [Flag question](#)

With reference to fiber optic communication, in Rise time budget analysis factors to be considered are -----

- ☐ a. Rise time of the fiber only
- ☐ b. Rise time of the fiber source and Receiver
- ☐ c. Rise time of the receiver only
- ☐ d. Rise time of the source only

The correct answer is: Rise time of the fiber source and Receiver

Question 109

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication, In Rise time budget analysis Rise time of Source and detector can be found using ----- .

- ☐ a. DATA Sheet of OEM
- ☐ b. Can be assumed reasonably
- ☐ c. By making a logical guess
- ☐ d. Suitable measurement technique

The correct answer is: DATA Sheet of OEM

Question 110

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication, Inter modal dispersion present in

- ☐ a. Cannot be said with given data
- ☐ b. Only in SM fibers
- ☐ c. Only in MM fibers
- ☐ d. Both SM & MM fibers

The correct answer is: Only in MM fibers

Question 111

Not answered

Marked out of 1.00

 [Flag question](#)

With reference to fiber optic communication, Link power budget analysis is to be performed to ensure -----
--- .

- ☐ a. Sufficient system operation margin
- ☐ b. Link operational feasibility
- ☐ c. Minimum power available at the receiver
- ☐ d. To ensure system margin, link feasibility and minimum power available at the receiver

The correct answer is: To ensure system margin, link feasibility and minimum power available at the receiver

Question 112

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication, Polarization mode dispersion (PMD) is significant when-----

- ☐ a. Data rates above 2Mbps but less than 1Gbps
- ☐ b. Data rates below 1Gbps
- ☐ c. Data rates above 1Gbps
- ☐ d. Data rates below 30Mbps

The correct answer is: Data rates above 1Gbps

Question 113

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication, Scattering and absorption of light signal cause -----

- ☐ a. Dispersion
- ☐ b. Attenuation
- ☐ c. Gain to the signal
- ☐ d. Total internal reflection

The correct answer is: Attenuation

Question 114

Not answered

Marked out of 1.00

[Flag question](#)

With reference to fiber optic communication, the hydroxyl ions and impurities present in the silica are the reasons for of light signals.

- ☐ a. Absorption
- ☐ b. Bending
- ☐ c. Dispersion
- ☐ d. Scattering

The correct answer is: Absorption

Question 115

Not answered

Marked out of 1.00

[Flag question](#)

With reference to OFC, Mode-Field Diameter (MFD) defined as the

- ☐ a. Size of the buffer thickness
- ☐ b. Diameter of the cladding
- ☐ c. Diameter of the core
- ☐ d. Size of the power distribution

The correct answer is: Size of the power distribution
